

Implementing Generative AI (GenAI) in the workplace

LEVEL 4

This course empowers learners with the expertise to harness Generative AI (GenAI) technologies in a professional setting.

Participants will dive into advanced GenAI strategies, evaluate how these tools can boost business performance, and learn to implement them ethically, securely, and responsibly.

What will I learn?

This course provides a comprehensive understanding of artificial intelligence (AI) and generative AI (GenAI), exploring their principles, applications, and impact on the modern workplace.

Learners will gain practical skills to evaluate, select, and implement GenAI tools effectively and responsibly. Topics include large language models, image generation, ethical and legal considerations, and prompt engineering.

You'll learn how to enhance productivity, manage AI-generated insights, and support informed decision-making.

Emphasis is placed on ethical, secure, and sustainable GenAI use, ensuring alignment with current regulations, workforce needs, and organisational goals.

How will I learn?

To complete this course, learners must be currently employed and in a role that allows them to carry out real-world competency tasks. A dedicated course workshop will support learners in developing the required knowledge, delivered through a flexible mix of online and/or face-to-face sessions.

What will I achieve?

You will gain a Level 4 unit accreditation from Agored on Implementing Generative AI (GenAI) in the Workplace. Credits can be used to progress on to the full diploma within Agored Cymru Level 4 Diploma in User Centred Design
